

Shared Learning Objectives:
Interprofessional Education/Community Engagement
Clinical/Practicum Experiences

- To prioritize and assess the value and impact of interprofessional collaborative practice when improving the health and wellness of people, families, and communities.
- To demonstrate experience and actualize one's own role as a team member, as well as the role of other professionals in a healthcare team.
- To develop professional communication skills that enhance collaborative practice for people, families, and communities.
- To develop critical thinking and problem-solving skills when addressing complex healthcare issues using interprofessional collaboration.
- To assess the cultural, social, and other factors that influence healthcare outcomes in people, families, and communities.
- To study and appraise the power of community engagement using interprofessional collaboration, as well as our potential roles in accelerating social mobility and career opportunities.
- To detect, compare and appraise the complexities, importance, and best practices of partnered community-based research in improving healthcare inequities and in healthcare decision-making.
- To develop leadership skills in the areas of interprofessional education and community engagement, including inspiring and mobilizing interprofessional teams towards shared goals, and thereby health equity.
